**COST EFFECTIVE REPAIR RATHER THAN EXPENSIVE REPLACEMENT  
MEGLIO RIPARARE IN MODO ECONOMICO CHE SOSTITUIRE CON COSTI PIÙ  
ELEVATI.**

In the mechanical engineering and automotive sector damaged threads such as spark plugs, bolts, oil drain screw threads, oxygen sensor or exhaust mounts lead to costly and time-intensive item exchange. For parts with damaged or defective threads there is a second chance:

V-COIL Thread Insert System

Worn and damaged threads can be replaced by inserts in just four steps. They are stronger and with the same nominal diameter as before.

- simple handling
- fast installation in just four steps
- even in difficult to reach places
- durable & high quality
- cost & time saving
- fulfil the demands of the user, the customer and the machine

Also used daily in the electrical, medical, and aerospace industry as a preventive measure.

*Nel settore meccanico e automobilistico i filetti danneggiati di candele, bulloni passanti, tappi di scarico dell'olio, sonde Lambda o del supporto di scarico del tubo di scappamento comportano costose e lunghe sostituzioni. Per pezzi che riportano filetti logori, spanati o in genere danneggiati esiste una seconda opzione:*

Sistema a inserti filettati V-Coil

*Grazie all'impiego di assortimenti filettati e in sole 4 operazioni vecchi e logori filetti potranno essere completamente rigenerati tornano al vecchio diametro nominale di partenza.*

- Facile utilizzo
- Facile sostituzione in sole 4 operazioni
- Per uso anche in luoghi ristretti
- Lunga durata e di elevata qualità
- Economico e veloce
- Soddisfacente per l'utilizzatore, il cliente e le macchine

Utilizzabile anche per il rinforzo dei filetti in campo elettrico, medico e aerospaziale

## DRILLING

Clear the damaged thread with a Standard Drill. Up to M 12 (1/2") the KITS include the correct drill. To repair a spark plug thread no pre-drilling is necessary if using the special Spark Plug Tap. Please pay attention that for Fluteless Taps bigger holes are required.

## CHECK

Check that thread and pitch of the tap and the bolt match.

## TAPPING

Use the special V-COIL-Taps for cutting the holding thread into the cleared hole. It is recommended to use a suitable cutting oil.

## INSTALL THE INSERT

Place insert on Installation Tool and position the adjustable ring so that the insert tang is centred in the tang slot. Wind the Insert in with a light downward pressure until a half turn below the surface. Don't work against thread direction as the tang could break.

## TANG REMOVAL

After finishing lift the Installation Tool and use the Tang Break Tool to remove the tang. For bigger sizes and Spark Plug Taps use Long Nose Pliers to remove the tang.

Due to the narrow and exact tolerances the new thread normally is stronger than the original one.

## FORATURA

Eliminare il filetto danneggiato con una punta normale. I nostri kit includono punte fino a M12 (1/2"). Nella sostituzione di una candela non è necessario eseguire la preforatura se si usa lo speciale attrezzo combinato per foratura e taglio. Nota bene: per i maschi per laminazione sono necessari fori più grandi.

## CONTROLLI

Verificare che il maschio e il bullone abbiano lo stesso filetto e lo stesso passo.

## FILETTO

Utilizzando gli speciali maschi V-COIL, tagliare il filetto di presa nel foro preforato. E' consigliabile l'uso di olio da taglio adeguato.

## INTRODUZIONE DELL'INSERTO FILETTATO

Porre il filetto sull'attrezzo di inserimento e posizionare l'anello regolabile in modo che il perno di trascinamento si incastri nella sede dell'apertura. Avvitare quindi con una leggera pressione verso il basso fino a mezzo giro sotto la superficie. Non avvitare in senso opposto al filetto per evitare rotture del codolo.

## ELIMINAZIONE DEL CODOLO

Una volta terminato l'inserimento del filetto, estrarre l'attrezzo di inserimento ed eliminare il perno di trascinamento con l'attrezzo rottura codolo. Nel caso di grandi dimensioni e di candele utilizzare pinze lunghe per rimuovere il codolo. Grazie alle tolleranze ridotte e precise, il nuovo filetto risulta normalmente più forte dell'originale.

### Application:

**Thread Armour Plating.** For material with low shear strength eg. aluminum-alloys and magnesium alloys. Used in machine-building, electrical, automotive medical and aerospace industries.

**Thread Repair** of damaged or worn-out threads.

**Recovery** of rejected items.

### Applicazioni:

**Rivestimento del filetto.** Per materiali teneri, per es. Le leghe di alluminio e di magnesio. Utilizzati nella costruzione di macchine, nel settore elettrico, automobilistico, medico ed aerospaziale.

**Riparazione di filetti** danneggiati o usurati.

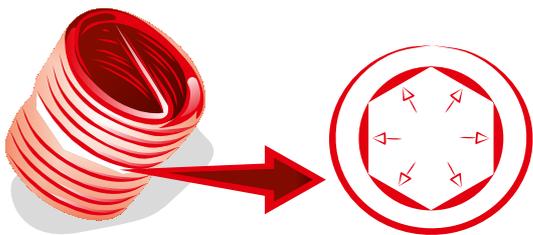

**Recupero di pezzi di scarto.**

## WIRE THREAD INSERTS FILETTI RIPORTATI

S

SL

Manufactured from high quality chromium nickel stainless steel, V-COIL inserts provide high strength internal threads that resist the effects of temperature and corrosion.

Their unique design ensures superior threads whose compound performance cannot be reproduced by any other single fastening method.

Available in two basic forms, free running or screw locking, they are much lighter and less expensive than any other equivalent type of thread insert and because of their compact size they can generally be incorporated into existing designs where no previous provision has been made.

### Free Running - Type "S"

Produced from precision profiled austenitic stainless steel wire wound into a helical spiral, V-COIL free running inserts have a spring like appearance. When installed, using any one of a variety of manual or automatic tools, they provide strong permanent internal threads which resist head and corrosion. Once fitted, their position is maintained by the action of radial pressure between their coils and the flanks of the tapped hole. This pressure exists because their free diameter is larger, by a calculated amount, than their installed diameter.

### Screw Locking - Type "SL"

Screw locking (or prevailing torque) inserts are of particular value in applications subject to the effects of cyclic vibration or impact. In addition to the benefits afforded by free running inserts, V-COIL screw locking inserts offer the additional security of prevailing locking torque. This is achieved by the action of one or more polygonal grip coils positioned within the insert's length, which exert radial pressure on the male thread. Each grip coil consists of a number of tangential locking chords which protrude inside the minor diameter of the normal free running coils. As the male thread passes through these grip coils, the locking flats are displaced thus exerting radial pressure or prevailing torque on the male thread. On removal of the male thread, the locking coils relax to their original form permitting repeated assembly whilst retaining a measurable level of prevailing torque.

Note: It is recommended that only close fit plated or lubricated bolts or screws are used with screw locking inserts.

I filetti V-COIL, costruiti con acciaio inox al nichelcromo, sono filetti interni estremamente robusti, resistenti agli effetti della temperatura e della corrosione.

Il design unico garantisce filetti di qualità superiore le cui prestazioni combinate non sono imitabili da nessun altro metodo di fissaggio singolo.

Disponibili in due formati, a scorrimento libero o autofrenanti, i filetti V-COIL sono molto più leggeri e convenienti di qualsiasi altro tipo equivalente di filetto riportato.

### Filetti a scorrimento libero - "free running"

Prodotti da profilato di precisione in acciaio inox austenitico avvolti a spirale elicoidale, i filetti riportati V-COIL hanno l'aspetto di una molla. Una volta inseriti usando un attrezzo a scelta da una selezione di utensili manuali o automatici, essi sono filetti permanenti interni resistenti al calore e alla corrosione. Quando sono posizionati, la loro posizione è mantenuta dall'azione della pressione radiale fa le bobine e i fianchi del foro filettato. Questa pressione è data dal loro diametro libero che è maggiore, di una misura calcolata, rispetto al diametro installato.

### Filetti autofrenanti - "screw locking"

I filetti autofrenanti (o con coppia prevalente) sono particolarmente validi nelle applicazioni soggette a vibrazioni cicliche o a impatti. Oltre ai vantaggi garantiti dai filetti a scorrimento libero, i filetti autofrenanti V-COIL offrono inoltre la sicurezza della coppia frenante prevalente. Questo grazie all'azione di uno o più bobine di presa poligonali collocate sulla lunghezza dei filetti che esercitano una pressione radiale sul filetto maschio. Ciascuna bobina di presa è composta da un numero di filature di blocco che sporgono entro il diametro inferiore delle normali bobine a scorrimento libero. Quando il filetto maschio passa attraverso queste bobine di presa, si spostano i locking flats, esercitando una pressione radiale o coppia prevalente sul filetto maschio. Rimuovendo il filetto maschio, le bobine di presa tornano alla loro forma originale permettendo il montaggio ripetuto mantenendo un livello misurabile di coppia prevalente.

Nota: con i filetti autofrenanti si raccomanda l'uso esclusivo di bulloni o viti close fit plated o lubrificati.

THREAD REPAIR KITS  
KIT RIPRISTINA FILETTI

**V-COIL**   
THREAD INSERT SYSTEM ■■■■

= application flexibility  
= Flessibilità di utilizzo

Advantages:

- all tools with 1/4" Hexagon Drive
- to be used by hand or cordless powertool
- no adjustment by hand while assembling
- handy, even in awkward places

Vantaggi:

- Tutti gli utensili con attacco esagonale da 1/4"
- Per uso a mano o per uso con avvitatori a batteria
- Nessun tipo di regolazione a mano durante l'impiego
- A mano per uso anche in luoghi ristretti

**V-COIL**  
THREAD INSERT SYSTEM ■■■■

= three drive changes  
= tre sistemi di manovra

## INSERTING TOOLS UTENSILI PER IL MONTAGGIO

### Advantages:

- easy handling
- one tool for various dimensions

### Vantaggi:

- Facile utilizzo
- Un unico utensile per più grandezze

### Advantages:

- with Hexagon Drive
- to be used by hand or cordless powertool
- no adjustment by hand while assembling
- handy, even in awkward places

### Vantaggi:

- Con attacco esagonale
- Per uso a mano o per uso con avvitatori a batteria
- Nessun tipo di regolazione a mano durante l'impiego
- A mano per uso anche in luoghi ristretti
